Introduction

Mental health is a state of well-being in which every individual realises his or her own potential, can cope with the normal stresses of life, can work productively and fruitfully, and is able to make a contribution to her or his community. (World Health Organisation)

All members of King's College London Mathematics School (hereafter, KCLMS) community (students, staff, parents / carers, governors) should be encouraged to make positive choices that benefit themselves and the wider KCLMS community. At KCLMS we aim to promote positive mental health for every member of our school community. We pursue this aim using both universal, whole school approaches and specialised, targeted approaches aimed at vulnerable students.

In addition to promoting positive mental health, we aim to recognise and respond to mental ill health. National statistics state that in an average classroom, three children will be suffering from a diagnosable mental health issue. By developing and implementing practical, relevant and effective mental health policies and procedures we can promote a safe and stable environment for students affected both directly, and indirectly by mental ill health.

Legal Framework

This policy has been written with reference to the following guidance and documents:

- [KCLMS Safeguarding Policy](#)
- [KCLMS Home School agreement](#)
- [KCLMS First Aid Policy](#)
- [KCLMS SEND Policy](#)

Also see the Department for Education's [Mental Health & Behaviour](#) - advice for Schools 2018.

Aims of the policy

The policy seeks to promote proactive wellbeing and an environment enabling positive mental health across the KCLMS community by increasing understanding and awareness of common

mental health issues. The policy also recognises the need to respond to situations where an individual is experiencing mental ill health. As such, the policy aims to alert staff to early warning signs of mental ill health and provide support to staff working with young people with mental health issues, as well as to students suffering mental ill health and their peers. The policy also seeks to provide guidance on record keeping in order to ensure clarity and good practice.

Scope of the policy

This policy describes the school's approach to promoting positive mental health and wellbeing, and the action taken where an individual is experiencing mental ill health. This policy is intended as guidance for all staff including teaching and support staff and governors.

Responsibilities

All staff have a responsibility to promote the mental health of students. Staff with a specific, relevant remit include:

- The Assistant Head (PDBW) is our Designated Safeguarding/Child Protection Lead as well as being our Mental Health Lead. The AH (PDBW) oversees all aspects of pastoral care and is trained as a Designated Safeguarding Lead as well as having Mental Health First Aid training.
- The Head Teacher is our deputy Designated Safeguarding/child protection Lead and is trained as a Designated Safeguarding Lead.
- The Lead Teacher for Sixth Form, who is also Mental Health First Aid trained, oversees the individual wellbeing of all students and works closely with the AH (PDBW) in following up any concerns in this area.
- Each Tutor takes frontline responsibility for the collective wellbeing of those in their tutor group.
- All teachers look after the wellbeing of those in their classes, noticing and following up on any concerns.
- Support staff who come into contact with our students also follow up on any concerns.

Any member of staff who is concerned about the mental health or wellbeing of a student must speak to the Mental Health Lead, in the first instance. If there is a fear that the student is in danger of immediate harm then the normal child protection procedures must be followed with an immediate referral to the Designated Safeguarding Lead. If the student presents a medical emergency then the normal procedures for medical emergencies will be followed, including alerting the first aid staff and contacting the emergency services if necessary. Where a referral to the Child & Adolescent Mental Health Services (CAMHS) is appropriate, this will be led and managed by the Mental Health Lead. Guidance about referring to CAMHS is provided in Appendix F.

Individual Support Plans

It can be helpful to draw up an individual support plan for students with mental health issues or who receive a diagnosis pertaining to their mental health. This will be drawn up by the

Designated Safeguarding Lead involving the student, the parents / carers and (where appropriate) relevant health professionals, and kept on the student's confidential file. This will be individual to each student/circumstance but may include:

- Details of a student's condition
- Special requirements and precautions
- Medication and any side effects
- What to do, and who to contact in an emergency
- The role the school can play

Teaching about Wellbeing, including positive mental health

The skills, knowledge and understanding needed by our students to keep themselves and others physically and mentally healthy and safe are included as part of our Personal Development curriculum. The specific content of lessons will be determined by the specific needs of the cohort but there will always be an emphasis on enabling students to develop the skills, knowledge, understanding, language and confidence to seek help, as needed, for themselves or others. We will follow the [PSHCE Association Guidance](#) to ensure that we teach mental health and emotional wellbeing issues in a safe and sensitive manner which helps rather than harms.

Signposting

We will ensure that staff, students and parents / carers are aware of sources of support within school and in the local community. What support is available within our school and local community, who it is aimed at and how to access it is outlined in Appendix D.

We will display relevant sources of support and will regularly highlight sources of support to students within relevant parts of the curriculum. We recognise that by highlighting sources of support, we will increase the chance of student help-seeking by ensuring students understand:

- What help is available
- Who it is aimed at
- How to access it
- Why to access it
- What is likely to happen next

Warning Signs

Staff may become aware of warning signs which indicate a student is experiencing mental health or emotional wellbeing issues. These warning signs must **always** be taken seriously and staff observing any of these warning signs must communicate their concerns to the Mental Health Lead.

Possible warning signs include:

- Physical signs of harm that are repeated or appear non-accidental
- Changes in eating / sleeping habits
- Increased isolation from friends or family, becoming socially withdrawn

- Changes in activity and mood
- Lowering of academic achievement
- Talking or joking about self-harm or suicide
- Abusing drugs or alcohol
- Expressing feelings of failure, uselessness or loss of hope
- Changes in clothing – e.g. long sleeves in warm weather
- Secretive behaviour
- Not participating in Physical Education lessons or getting changed secretly
- Repeated physical pain or nausea with no evident cause
- An increase in lateness or absenteeism to school and/or to lessons

Managing disclosures about mental health

A student may choose to disclose concerns about their own, or a friend's mental health to any member of staff, so all staff need to know how to respond appropriately to a disclosure.

If a student chooses to disclose concerns about their own mental health or that of a friend to a member of staff, the member of staff's response should always be calm, supportive and non-judgemental. Staff should listen, rather than advise and our first thoughts should be of the student's emotional and physical safety rather than of exploring 'Why?' For more information about how to handle mental health disclosures sensitively see Appendix E.

A write up of such disclosures will be recorded and held on the student's confidential file. This record should include:

- Date
- The name of the member of staff to whom the disclosure was made
- Main points from the conversation (without additional commentary)
- Any agreed next steps

This information must be shared with the Mental Health Lead, who will store the record appropriately and offer support and advice about next steps.

Confidentiality

We must be honest with regards to the issue of confidentiality. If it is necessary for us to pass our concerns about a student on, then we should discuss with the student:

- Who we are going to talk to
- What we are going to tell them
- Why we need to tell them

We should never share information about a student without first telling them. Ideally we would receive their consent, though there are certain situations when information must always be shared with another member of staff and / or a parent.

Disclosures should always be shared with the AH (PDBW), who will keep others involved in safeguarding informed as necessary. This helps to safeguard our own emotional wellbeing as

we are no longer solely responsible for the student, ensures continuity of care in our absence and provides an extra source of ideas and support. This should be explained to the student.

Parents / carers should always be informed if the student is in danger of harm and this would not cause more harm. Students may choose to tell their parents / carers themselves, and this is to be encouraged. If this is the case, the student should be given a short window of time (no more than 24 hours) to share this information before the school contacts parents / carers. We will always give students the option of us informing parents / carers for them or with them.

If a student gives us reason to believe that there may be underlying child protection issues, then the relevant Safeguarding Procedures will be activated.

Working with Parents / Carers

Where it is deemed appropriate to inform parents / carers (this decision must be made with the AH (PDBW) or the Head Teacher), we need to be sensitive in our approach. Before disclosing to parents / carers we should consider the following (on a case by case basis): where the conversation should take place, who should be there and the aims of the meeting. Notes on the meeting must be added to the student's confidential file.

It can be shocking and upsetting for parents / carers to learn of their child's issues and many may respond with anger, fear or upset during the first conversation. We should be accepting of this (within reason) and give the parent time to reflect. We should highlight further sources of information and give them relevant information to take away, where possible, as they will often find it hard to take much in whilst coming to terms with the news that you're sharing. Sharing sources of further support aimed specifically at parents / carers can also be helpful too e.g. parent helplines and forums.

We should always provide clear means of contacting us with further questions and consider booking in a follow up meeting or phone call right away as parents / carers often have many questions as they process the information. We should finish each meeting with agreed next steps and always keep a brief record of the meeting on the student's confidential record. Any verbal communication with parents / carers whose child is receiving support from mental health professionals must be followed up with an email to the parents / carers confirming the content of the conversation. All written communications for these students must be forwarded to the Mental Health/Designated Safeguarding Lead.

Working with All Parents / Carers

Parents / carers are often very welcoming of support and information from the school about supporting their children's emotional and mental health. In order to support parents / carers we will:

- Highlight sources of information and support about common mental health issues
- Ensure that all parents / carers are aware of who to talk to, and how to get information about this, if they have concerns about their own child or a friend of their child
- Make our mental health policy easily accessible to parents / carers

- Share ideas about how parents / carers can support positive mental health in their children
- Keep parents / carers informed about the mental health topics their children are learning about in PD and share ideas for extending and exploring this learning at home

Supporting Peers

When a student is suffering from mental health issues, it can be a difficult time for their friends. Friends often want to access support but do not know how. In the case of self-harm or eating disorders, it is also possible that friends may learn unhealthy coping mechanisms from each other. In order to keep peers safe, we will consider on a case by case basis which friends may need additional support. Support may be provided either in one-to-one or group settings and will be guided by conversations by the student who is suffering and their parents / carers with whom we will discuss:

- What it is possible and helpful for friends to know and what they should not be told
- How friends can best support
- Things friends should avoid doing / saying which may inadvertently cause upset
- Warning signs that their friend needs help (e.g. signs of relapse)

Additionally, we will want to highlight with peers:

- Where and how to access support for themselves
- Safe sources of further information about their friend's condition
- Healthy ways of coping with the difficult emotions they may be feeling

Working with Mental Health Professionals

We always aim to work closely with any professionals who are supporting our students, as this enables us to offer joined up care for the benefit of the student. For this reason, we encourage students/families to give permission for information to be shared between the professionals and the school. This allows both school and professionals to share any key information plus any concerns or changes, so that the student can be supported appropriately. As a school, we can often give insights into how the student is coping with day to day life and can describe any particular concerns. We listen carefully to, and reflect on, any advice given by the professionals about how best we can support the student in school. Any verbal communication with mental health professionals about students they are supporting must be followed up with an email to the mental health professionals confirming the content of the conversation. All written communications about these students must be forwarded to the Mental Health/Designated Safeguarding Lead.

Training

As a minimum, all staff will receive regular training about recognising and responding to mental health issues as part of their regular Child Protection training in order to enable them to keep students safe. We will host relevant information, both within this policy and its appendices, and on our Sharepoint area for staff who wish to learn more about mental health.

The [MindEd learning portal](#) provides free online training suitable for staff wishing to know more about a specific issue.

Training opportunities for staff who require more in depth knowledge will be considered as part of our performance management process and additional CPD will be supported throughout the year where it becomes appropriate due to developing situations with one or more students. Where the need to do so becomes evident, we will host training sessions for all staff to promote learning or understanding about specific issues related to mental health. Suggestions for individual, group or whole school CPD should be discussed with the Mental Health Lead, who can also highlight sources of relevant training and support for individuals as needed. As an example, the [Charlie Waller Memorial Trust](#) provides funded training to schools on a variety of topics related to mental health, the AH (PDBW) has delivered some of this training for them at other venues.

Appendix A: Further information and sources of support about common mental health issues

Prevalence of Mental Health and Emotional Wellbeing Issues²

- NHS 2018 report found that 1 in 9 children and young people aged 5 - 15 suffer from a diagnosable mental health disorder - that is around three children in every class.
- NHS Digital report 2018 found that a quarter of 11- to 16-year-olds with a mental health disorder had self-harmed or attempted suicide. This compared with 3 per cent who do not have a diagnosed condition.
- There has been a big increase in the number of young people being admitted to hospital because of self-harm. Over the last ten years this figure has increased by approximately 70%.
- More than half of all adults with mental health problems were diagnosed in student-hood. Less than half were treated appropriately at the time.
- Nearly 80,000 children and young people suffer from severe depression.
- The number of young people aged 15-16 with depression nearly doubled between the 1980s and the 2000s.
- Over 8,000 children aged under 10 years old suffer from severe depression.
- 3.3% or about 290,000 children and young people have an anxiety disorder.
- 72% of children in care have behavioural or emotional problems - these are some of the most vulnerable people in our society.

Below, there is sign-posted information and guidance about the issues most commonly seen in school-aged children. The links will take you through to the most relevant page of the listed website. Some pages are aimed primarily at parents / carers but they are listed here because we think they are useful for school staff too. Support on all of these issues can be accessed via [Young Minds \(www.youngminds.org.uk\)](http://www.youngminds.org.uk), [Mind \(www.mind.org.uk\)](http://www.mind.org.uk) and (for e-learning opportunities) [Minded \(www.minded.org.uk\)](http://www.minded.org.uk).

Self-harm

Self-harm describes any behaviour where a young person causes harm to themselves in order to cope with thoughts, feelings or experiences they are not able to manage in any other way. It most frequently takes the form of cutting, burning or non-lethal overdoses in adolescents, while younger children and young people with special needs are more likely to pick or scratch at wounds, pull out their hair or bang or bruise themselves.

Depression

Ups and downs are a normal part of life for everyone, but for someone who is suffering from depression these ups and downs may be more extreme. Feelings of failure, hopelessness, numbness or sadness may invade their day-to-day life over an extended period of weeks or months, and have a significant impact on their behaviour and ability and motivation to engage in day-to-day activities.

Anxiety, panic attacks and phobias

Anxiety can take many forms in children and young people, and it is something that everyone experiences at low levels as part of normal life. When thoughts of anxiety, fear or panic are repeatedly present over several weeks or months and/or they are beginning to impact on a young person's ability to access or enjoy day-to-day life, intervention is needed.

Obsessions and Compulsions

Obsessions describe intrusive thoughts or feelings that enter a person's mind which are disturbing or upsetting; compulsions are the behaviours carried out in order to manage those thoughts or feelings. For example, a young person may be constantly worried that their house will burn down if they don't turn off all switches before leaving the house. They may respond to these thoughts by repeatedly checking switches, perhaps returning home several times to do so. Obsessive compulsive disorder (OCD) can take many forms – it is not just about cleaning and checking.

Suicidal feelings

Young people may experience complicated thoughts and feelings about wanting to end their own lives. Some young people never act on these feelings though they may openly discuss and explore them, while other young people die suddenly from suicide apparently out of the blue.

Eating problems

Food, weight and shape may be used as a way of coping with, or communicating about, difficult thoughts, feelings and behaviours that a young person experiences day to day. Some young people develop eating disorders such as anorexia (where food intake is restricted), binge eating disorder and bulimia nervosa (a cycle of bingeing and purging). Other young people, particularly those of primary or preschool age, may develop problematic behaviours around food including refusing to eat in certain situations or with certain people. This can be a way of communicating messages the student does not have the words to convey.

Appendix E: Talking to students when they make mental health disclosures

The advice below is from students themselves, in their own words, together with some additional ideas to help you in initial conversations with students when they disclose mental health concerns. This advice should be considered alongside relevant school policies on pastoral care and child protection and discussed with relevant colleagues as appropriate.

Focus on listening

"She listened, and I mean REALLY listened. She didn't interrupt me or ask me to explain myself or anything, she just let me talk and talk and talk. I had been unsure about talking to anyone but I knew quite quickly that I'd chosen the right person to talk to and that it would be a turning point."

If a student has come to you, it's because they trust you and feel a need to share their difficulties with someone. Let them talk. Ask occasional open questions if you need to in order to encourage them to keep exploring their feelings and opening up to you. Just letting them pour out what they're thinking will make a huge difference and marks a huge first step in recovery. Up until now they may not have admitted even to themselves that there is a problem.

Don't talk too much

"Sometimes it's hard to explain what's going on in my head – it doesn't make a lot of sense and I've kind of gotten used to keeping myself to myself. But just 'cos I'm struggling to find the right words doesn't mean you should help me. Just keep quiet, I'll get there in the end."

The student should be talking at least three quarters of the time. If that's not the case then you need to redress the balance. You are here to listen, not to talk. Sometimes the conversation may lapse into silence. Try not to give in to the urge to fill the gap, but rather wait until the student does so. This can often lead to them exploring their feelings more deeply. Of course, you should interject occasionally, perhaps with questions to the student to explore certain topics they've touched on more deeply, or to show that you understand and are supportive. Don't feel an urge to over-analyse the situation or try to offer answers. This all comes later. For now, your role is simply one of supportive listener. So, make sure you're listening!

Don't pretend to understand

"I think that all teachers got taught on some course somewhere to say 'I understand how that must feel' the moment you open up. YOU DON'T – don't even pretend to, it's not helpful, it's insulting."

The concept of a mental health difficulty such as an eating disorder or obsessive compulsive disorder (OCD) can seem completely alien if you've never experienced these difficulties first hand. You may find yourself wondering why on earth someone would do these things to themselves, but don't explore those feelings with the sufferer. Instead listen hard to what they're saying and encourage them to talk and you'll slowly start to understand what steps they might be ready to take in order to start making some changes.

Don't be afraid to make eye contact

"She was so disgusted by what I told her that she couldn't bear to look at me."

It's important to try to maintain a natural level of eye contact (even if you have to think very hard about doing so and it doesn't feel natural to you at all). If you make too much eye contact, the student may interpret this as you staring at them. They may think that you are horrified about what they are saying or think they are a 'freak'. On the other hand, if you don't make eye contact at all then a student may interpret this as you being disgusted by them – to the extent that you can't bring yourself to look at them. Making an effort to maintain natural eye contact will convey a very positive message to the student.

Offer support

"I was worried how she'd react, but my Mum just listened then said 'How can I support you?' – no one had asked me that before and it made me realise that she cared. Between us we thought of some really practical things she could do to help me stop self-harming."

Never leave this kind of conversation without agreeing next steps. These will be informed by your conversations with appropriate colleagues and the school's policies on such issues. Whatever happens, you should have some form of next steps to carry out after the conversation because this will help the student to realise that you're working with them to move things forward.

Acknowledge how hard it is to discuss these issues

"Talking about my bingeing for the first time was the hardest thing I ever did. When I was done talking, my teacher looked me in the eye and said 'That must have been really tough' – he was right, it was, but it meant so much that he realised what a big deal it was for me."

It can take a young person weeks or even months to admit they have a problem to themselves, let alone share that with anyone else. If a student chooses to confide in you, you should feel proud and privileged that they have such a high level of trust in you. Acknowledging both how brave they have been, and how glad you are they chose to speak to you, conveys positive messages of support to the student.

Don't assume that an apparently negative response is actually a negative response

"The anorexic voice in my head was telling me to push help away so I was saying no. But there was a tiny part of me that wanted to get better. I just couldn't say it out loud or else I'd have to punish myself."

Despite the fact that a student has confided in you, and may even have expressed a desire to get on top of their illness, that doesn't mean they'll readily accept help. The illness may ensure they resist any form of help for as long as they possibly can. Don't be offended or upset if your offers of help are met with anger, indifference or insolence, it's the illness talking, not the student.

Never break your promises

"Whatever you say you'll do you have to do or else the trust we've built in you will be smashed to smithereens. And never lie. Just be honest. If you're going to tell someone just be upfront about it, we can handle that, what we can't handle is having our trust broken."

Above all else, a student wants to know they can trust you. That means if they want you to keep their issues confidential and you can't then you must be honest. Explain that, whilst you can't keep it a secret, you can ensure that it is handled within the school's policy of confidentiality and that only those who need to know about it in order to help will know about the situation. You can also be honest about the fact you don't have all the answers or aren't exactly sure what will happen next. Consider yourself the student's ally rather than their saviour and think about which next steps you can take together, always ensuring you follow relevant policies and consult appropriate colleagues.

Appendix F: How to talk to a student you are worried about (Samaritans advice sheet for staff)

Starting difficult conversations: If you're worried about a young person, try to get them to talk to you.

- Often people want to talk, but won't speak until someone asks how they are. Try asking open questions, like *'What happened about...'*, *'Tell me about...'*, *'How do you feel about...'*
- Repeat back what they say to show you understand and ask more questions.
- Focus on their feelings instead of trying to solve the problem - it can be of more help and shows you care.
- Respect what they tell you. Sometimes it's easy to want to try and fix a young person's problems, or give them advice. Try and let them make their own decisions.

How do I start a conversation with someone I'm concerned about?

You might feel that you don't know how to help someone, because you don't know what to tell them or how to solve their problems. You don't need to be an expert. In fact, sometimes people who think they have the answers to a problem are less helpful. Don't forget that every person is different, so that what worked for one will not always work for another.

Find a good time and place

- Ask gentle questions, and listen with care. Ask them how they feel.
- If you're gentle and calm it's ok to bring up the subject of self-harm or suicide.
- The more open the question the better. Questions that help someone talk through their problems instead of being able to say 'yes' or 'no' are the most useful.
- Questions such as:
 - **When** – 'When did you realise?'
 - **Where** – 'Where did that happen?'
 - **What** – 'What else happened?'
 - **How** – 'How did that feel?'
 - **Why** – be careful with this one as it can make someone defensive. *'What made you choose that?'* and *'What were you thinking about at the time?'* are more effective.

Find out how they feel: Revealing their innermost emotions – anger, sadness, fear, hope, jealousy, despair and so on — can be a huge relief. It sometimes also give clues about what the person is really most worried about.

Check that they know where to get help. Useful questions you might ask them include:

- *'Who else have you talked to about this?'*
- *'What do you think about getting some help?'*
- *'Would you like me to come with you?'*

If you say something that appears to cause more upset, don't panic.

- show you are listening;
- look after yourself, and talk to someone too.

If the person has made an explicit threat of suicide, you could contact the emergency services on 999.

- REMEMBER TO: Listen without judgment, assumptions, or interruptions. Let them know that you believe what they are saying and take them seriously.
- Know your limits and do not place yourself in physical danger – the best way to help is to connect your friend to appropriate support.

No matter what, you shouldn't be embarrassed or worried about offending or upsetting your friend. Helping your friend may take some courage, but it is always worth the effort to support their health and safety.
